Mitigation Notes:

1. Post-mitigation radon measurement shall not be initiated sooner than 24 hours or later than 30 days following completion of the installation of and activation of radon reduction system.
2. Post-mitigation testing determines efficacy of radon reduction system and may be necessary to validate the mitigators' installation guarantee/warranty.
3. Re-test every two years or sooner if there are any renovations that affect the air flow in the building. This biennial testing is recommended by the Illinois Emergency Management Agency, Division of Nuclear Management (IEMA). Providing opportunity to identify changes in radon concentrations in the building and adjustments to the radon reduction system [if present].
4. Additional radon measurement professionals may be registered and listed on the Illinois Emergency Management Agency website: <https://public.iema.stat.il.us/Radon/Home/LicenseIndex> (Radon Active Licensee Listing - Radon Tracking System (state.il.us))
